

Removable CAD-CAM partial denture frames

Continuously innovating

CONTINUOUSLY
INNOVATING

PHIBO® REMOVABLE
PROSTHESES

Once again, Phibo® is revolutionising prostheses with the
CAD-CAM partial denture frames.

- + **100% digital** workflow for a fully customised restoration.
- + Using an **innovative manufacturing** process developed by Phibo®.
- + With a **shorter lead time** than normal for this kind of product.

Simplicity and speed

Removable CAD-CAM
partial denture frames

phibo[®]

SIMPLICITY
AND SPEED

PHIBO[®] REMOVABLE
PROSTHESES

The new removable prostheses by Phibo[®] allow the laboratory to take **control of their production** because:

- + The laboratory saves time on painstaking processes, leading to **higher productivity**.
- + The **design is completed in a few minutes**, with a few clicks of the mouse.
- + Thanks to our new software and manufacturing process **any design can be reproduced in no time at all**.

Better than traditional casting

BETTER THAN
TRADITIONAL
CASTING

The removable prostheses obtained **are a significant improvement on the quality** of cast prostheses:¹

- + We obtain a **high-quality, uniform** metal structure with a perfect fit and consistent quality.
- + The **fit is significantly better than a cast prosthesis.**
- + Biocompatibility **guaranteed.**

¹ See the scientific studies in the references section.

Phibo® Frameworks: the difference

The Phibo® **framework is a significant improvement on the quality** of cast frameworks, the only solution available until now.¹

- + Stronger **and more ductile.**
- + Less **risk of the hooks breaking** when they are engaged.
- + And therefore... **fewer problems.**
- + **Mirror-like** polished finish.

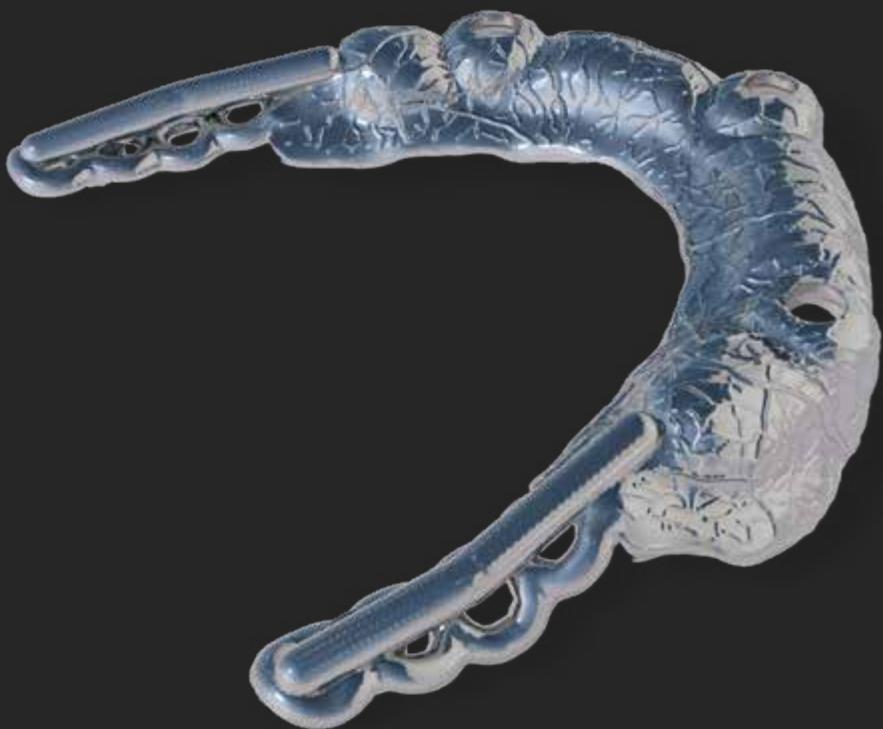

¹ Initially available for bars with Locator fittings.

FRAMEWORKS:
THE DIFFERENCE

Overdenture reinforcements

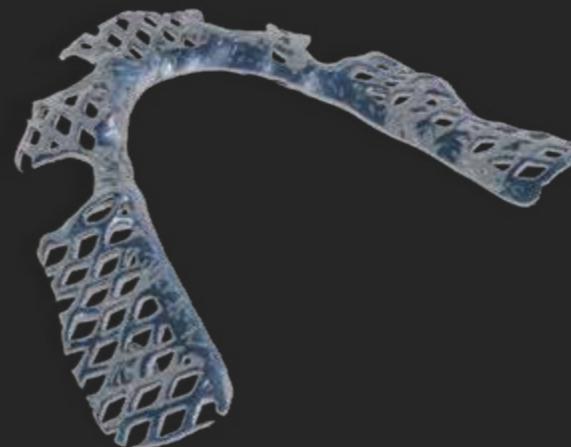

OVERDENTURE
REINFORCEMENTS

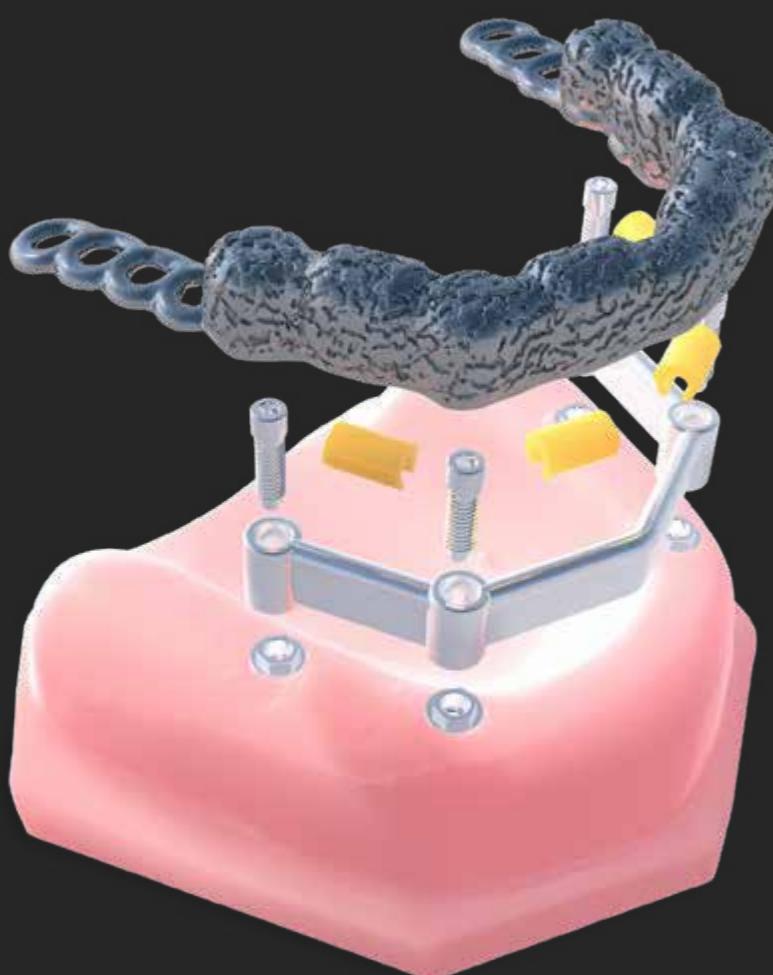

Overdenture reinforcements in CAD-CAM are **more flexible** and provide better results than traditional solutions:

- + They prevent fractures and reduce the thickness of the prosthesis, thus ensuring **greater functionality and an improved appearance.**
- + The **freedom of design** allows us to adapt the reinforcement to fit the final acrylic structure.
- + Adaptable to **different types of bars**,¹

¹, Initially available for bars with Locator fittings.

Suprastructures

The suprastructures made with Phibo CAD-CAM are the **ideal solution** for working in **difficult spaces**, achieving a **perfect fit** on the bar.

- + The thickness can be controlled, providing **greater stability and more space for the resin**.
- + Takes 90% **less time** than the traditional casting method.
- + Adaptable to **any type of bar**, providing an optimal fit on the bar.
